

Unification

On vous donne ici un exemple d'un ensemble de données concernant des employés de différents types. Lorsqu'on utilise la stratégie Unification–Unification pour l'héritage, toutes les données se retrouvent dans une seule table, Persons. Lorsqu'on applique d'autres stratégies de traduction de l'héritage, les données sont réparties différemment, notamment dans plusieurs tables (Employees, Academics et Engineers) en plus de la table Persons. Sélectionnez, dans chaque feuille (correspondant à une stratégie différente), les données réparties dans les différentes tables.

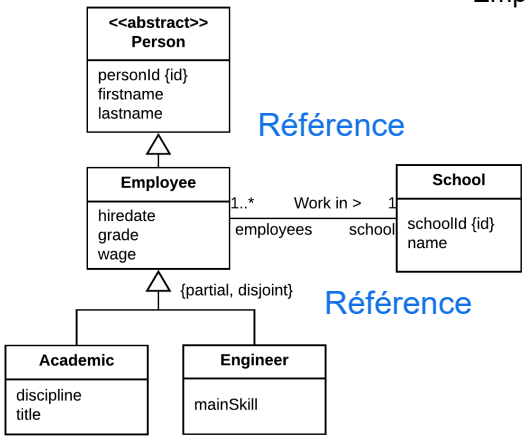

Unification
